One row per source lifecycle identity; Event Type displays while Family governs policy/order.
Updates stay inside Event detail; the feed shows each current Event once.
SOURCE: INV S13 + founder clarification.

S13b • Resident / Events location needed

9:41signal wifi battery

LHL / EVENTS

25 Example Lane

LOCATION NEEDED FOR EVENTS

We cannot match this saved home to Events right now.

You will not receive Event or alert notifications, and your personalized Events feed is unavailable until the address is fixed.

This is not a “no current Events” result.

Edit address

Help

Both location-dependent losses are explicit; this state never masquerades as an empty feed.
Community coordination remains available through the global footer.
SOURCE: INV S13 + approved no-usable-location rule.

S13 BOUNDARIES

ONE SOURCE IDENTITY PER ROW

Event Type displays. Event Family governs policy/ order. LHL never infers merge, upgrade, cancellation or supersession from labels.

NO PUSH-ELIGIBILITY LABEL

The feed does not expose internal Push Eligible or Notification Eligibility fields.

SIMULATED / SOURCE PENDING

Every sample is explicitly simulated. Protective Action availability is not implied.

PASS 2/B STILL REQUIRED

Empty, loading, offline, stale, source unavailable, corrected/retracted, expired/closed, and live/ simulated separation.

PLACEMENT & PROVENANCE

New Sheet 01 is right of A2 Round 2. A1/A2 nodes and review history were not changed.

SLICE B / 02 - Event detail and conditional related Events

One S14 pattern: explicit leave/stay wording, consistent acknowledgement, and source-gated related Event visibility

S14a • Resident / Event detail — related Event present

9:41signal wifi battery

LHL / EVENT DETAIL

◀ Events • 25 Example Lane

EVACUATION ORDER

SIMULATED TEST DATA — SOURCE PENDING

LEAVE NOW
Follow official instructions. If you are in danger, move to safety and call 911 when able.

CURRENT • Updated 4:42 PM
[RELEVANCE — TBD]
Source ID: simulated

RELATED EVENTS
WILDFIRE • View Event

CURRENT SOURCE UPDATE

4:42 PM — current update
Same simulated source identity
Geography/status/correction: source-governed

Open source link [TBD]

UPDATE HISTORY

4:18 PM — earlier update under same source ID
Material change creates a new acknowledgement state

I saw this updateView responses

HHelp

Same S14 pattern; no related Event is established, so no related section appears.
Acknowledgement and response controls match S14a for the eligible exact update.
SOURCE: INV S14 + founder clarification.

S14 BOUNDARIES

- DIRECTION IN WORDS

Evacuation Order says LEAVE NOW. Shelter-in-Place says STAY INDOORS / DO NOT LEAVE. Color is never the only cue.
- SOURCE LIFECYCLE GOVERNS

Current/history stays within one authoritative source identity. LHL does not infer upgrades, cancellation, expiry or coexistence.
- EXACT-UPDATE ACKNOWLEDGEMENT

I saw this update applies only to the eligible update shown. A material source change creates a new acknowledgement state.
- RELATED EVENTS ARE CONDITIONAL

Show only when authoritative identity evidence or an approved deterministic rule establishes the link. Otherwise omit the section.
- PASS 2/B + SOURCE WORK

Stale, correction/retraction, cancellation/closure, source unavailable, ineligible/no-control, and verified source identity/lifecycle remain open.

SLICE B / 03 — Exact-update responses

S15 placement remains a wireframe hypothesis; general adult-profile status is handled inline on S12/Home

S15a • Resident / update responses — hypothesis

Help

Provisional separate-screen hypothesis: selected community + search/filter supports 10–200 members. No cross-community exposure, denominator, safety, awareness or compliance claim. SOURCE: INV S15; placement remains a wireframe test.

S15 REVIEW QUESTIONS

- S15 PLACEMENT IS PROVISIONAL

This separate response screen is a testable hypothesis, not a locked navigation decision. Compare with expandable Event-detail and filtered-member patterns.
- SCALE + COMMUNITY PRIVACY

Selected-community context, search/filter and on-demand lists must work for 10–200 members without cross-community exposure.
- ONE ADULT PROFILE

Home Status now updates directly on S12 and remains attributed to the reporting adult. S16 is deleted.
- TWO MVE-1 INTERACTIONS

General S12/Home status and exact-update acknowledgement remain separate. Event-specific check-in is Post-G6.
- S12 STATUS FEEDBACK STILL OPEN

Home, Away and Left affected area now update inline. Confirmation, stale, missing/not shared and failure states remain open.

A2 ROUND 2 / 03 — Post-approval Home shell

S12 structure follows the founder-approved exploration; Home Status updates inline; wording remains provisional

S12a R2 • Resident / usable home location

Location-needed is not “no current Events.” Both Event losses are explicit.
Community Summary, inline three-choice Home Status and the footer remain available.
SOURCE: approved S12 exploration + 2026-09-11 founder correction.

CORRECTION BOUNDARIES

EVENT IDENTITIES

Different Event Types stay separate. Related-Event grouping and preview-slot competition remain later design work.

RELEVANCE PLACEHOLDER

[RELEVANCE — TBD] reserves the information requirement only. No icon, final wording, layout, or JSON choice is approved.

FOOTER BOUNDARY

S11 is the final footer-free onboarding screen. The fixed five-destination footer first appears on S12.

STILL DEFERRED

Detailed empty/loading/offline/corrected/suspended states; final copy and layout; ordering beyond evacuation-first; full A2 approval.

REVIEW PROVENANCE

Original A2 review artifacts remain provenance. Live S12a/S12b now include the authorized inline third status.
