

SLICE B ROUND 2 / 02 — Event detail and conditional Related Events

One S14 pattern: exact-update acknowledgement inside Current Source Update; Related Events only with evidence; no synthesized direction line

S14a R2 • Event detail — related Wildfire Event present

9:41signal wifi battery

LHL / EVENT DETAIL

◀ Events • 25 Example Lane

EVACUATION ORDER

SIMULATED TEST DATA — SOURCE PENDING

Updated 4:42 PM • [RELEVANCE — TBD]

Source identity: simulated

SAFETY & EMERGENCY HELP

Follow instructions from public authorities. If you believe you are in danger, move to a safe place and call 911 when able. LHL does not contact emergency services.

CURRENT SOURCE UPDATE

4:42 PM — current update

Simulated source identity • sample URL pending

Geography/status/correction: source-governed

Open source link

I saw this update

UPDATE HISTORY

4:18 PM — earlier update under same source ID

Material change creates a new acknowledgement state

RELATED EVENTS

Wildfire • View Event

WHO SAW THIS UPDATE

See who in Boulder Heights has acknowledged this update. Acknowledgement only records that someone tapped the button in LHL.

Community responses

HomeCommunityMessagesProfileHelp

S14a is the reachable Evacuation Order example. Related Wildfire stays a separate Event below history. I saw this update acts on the exact eligible source update; Community responses opens S15. SOURCE: 2026-09-14 founder dispositions.

S14b R2 • out-of-flow pattern demo — no related Event

9:41signal wifi battery

LHL / EVENT DETAIL

HomeCommunityMessagesProfileHelp

Pattern demonstration only: no current S13 feed row routes here. The same S14 structure omits Related Events when no authoritative link exists. SOURCE: 2026-09-14 founder dispositions.

S14 BOUNDARIES

NO SYNTHESIZED DIRECTION

MVE-1 shows the sourced Event Type and required source link; LHL does not generate an imperative leave/stay line from Type labels.

SOURCE LIFECYCLE GOVERNS

Current/history stays within one authoritative source identity. LHL does not infer upgrades, cancellation, expiry or coexistence.

EXACT-UPDATE ACKNOWLEDGEMENT

I saw this update applies only to the eligible update shown. A material source change creates a new acknowledgement state.

RELATED EVENTS ARE CONDITIONAL

Show only when authoritative identity evidence or an approved deterministic rule establishes the link. Otherwise omit the section.

PASS 2/B • SOURCE WORK

Stale, correction/retraction, cancellation/closure, source unavailable, ineligible/no-control, and verified source identity/lifecycle remain open.

Pin falls within S14a’s Safety & Emergency Help panel. [Open the live R2 S14 sheet.](#)

Think this should be at the VERY TOP above the alert/event

Exact native Figma comment text. Review input only; no move or product-rule change has been approved.

R2 S14 sheet 143:125 · Figma pin offset (353, 402). Marker reconstructed from API coordinates.

Pin falls within S14a's Current Source Update actions. [Open the live R2 S14 sheet](#).

I struggle now with this being here? Should the source link be with the alert (in this case the Evacuation order box)? This can just be about acknowledging the update.

Also, what if there are multiple updates in the history? Do you have to comeback and mark update on the most current source?

We haven't decided, but i'm also assuming THIS IS THE LANDING page for push eligible notifications? It will bring you direct to the event detail page?

Exact native Figma comment text. Questions are not approved routing, link-placement, or acknowledgement rules.

R2 S14 sheet 143:125 · Figma pin offset (335, 571). Marker reconstructed from API coordinates.

SLICE B ROUND 2 / 03 — Community responses

S15 placement provisional; member status is factual, never an LHL urgency judgment

Provisional separate-screen hypothesis: selected community + search/filter supports 10–200 members. Status is self-reported fact; no derived urgency, address shorthand, safety, awareness or compliance claim. SOURCE: 2026-09-14 founder dispositions.

S15 REVIEW QUESTIONS

S15 PLACEMENT IS PROVISIONAL

This separate response screen is a testable hypothesis, not a locked navigation decision. Compare with expandable Event-detail and filtered-member patterns.

SCALE + COMMUNITY PRIVACY

Use only first name + last initial and already community-visible status. No address shorthand, cross-community exposure, denominator, or sorting/badging/highlighting by status plus acknowledgement.

ONE ADULT PROFILE

S12 Home Status is the adult's own voluntary report; Evacuated is an action, not verified safety or arrival. S15 may show that report beside the member name.

TWO MVE-1 INTERACTIONS

General S12/Home status and exact-update acknowledgement remain separate. Event-specific check-in is Post-G6.

S15 STATUS STALENESS

No status = never set; No recent status = report older than 48h on S15 only. S12 still shows the owner's older status. Confirmation/failure feedback remains open.

Pin falls within S15a’s disclaimer panel. [Open the live R2 S15 sheet.](#)

I think we should change this to:
This shows only who has clicked to acknowledge the update in <app name>. It does not...
I dont want to say "tell you whether anyone is safe". I want this to be more like "does not imply safety status". Cause like wise it also doesn't imply they are in harms-way...

Exact native Figma comment text. The existing approved S15 disclaimer remains the current baseline until John explicitly dispositions a replacement.

R2 S15 sheet 143:248 · Figma pin offset (375, 509). Marker reconstructed from API coordinates.
